## Infection Prevention and Control (IPC)..1

IPC strategies to prevent or limit infection transmission in health-care settings include the following:

- Early recognition and source control
  - Encourage HCWs to have a **HIGH LEVEL OF CLINICAL SUSPICION** - Institute screening questionnaire and - Post signage in public areas reminding symptomatic patients to alert HCWs.
  - Promotion of **RESPIRATORY HYGIENE** is an important preventative measure. Suspected nCoV patients should be placed in an area separate from other patients, and additional IPC (droplet and contact) precautions promptly implemented.

## Infection Prevention and Control (IPC)..2
